

SAAD'S SMART ORIENTATION APP BREAKDOWN

Part By Part Detailed Breakdown

"Made by Saad Adnane"

DESIGN

- ▶ `#!/usr/bin/env python3`
- ▶ `# coding: utf-8`
- ▶ Upwards I'm just telling your PC to run this as a Python code "the first line isn't needed in Windows"
- ▶ In the second line I'm adding support to imogies, french accents and arabic letters "in case I needed them"
- ▶ `import tkinter as tk`
- ▶ `from tkinter import ttk, messagebox`
- ▶ first line is importing a library that I need and aliasing it as tk
- ▶ And the second I'm importing ttk "Themed tkinter"
- ▶ `root = tk.Tk()`
- ▶ `root.title("Saad's Orientation Assistant")`
- ▶ Creating main frame and title

Downwards I'm creating labels and entries "simply design" and tricking tkinter so I can use ".grid" and ".pack" in the same window

```
MainLabel1 = tk.Label(root, text = "Welcome to Saad's Orientation app for 2AC!", font=("Arial", 16, "bold") ,foreground="Blue")
```

```
MainLabel1.pack()
```

```
MainLabel2 = tk.Label(root, text = "Write down your marks to see which orientation is best for you", font=("Arial", 12), pady = 10)
```

```
MainLabel2.pack()
```

```
Frame = ttk.Frame(root)
```

```
Frame.pack(pady = 20)
```

```
Label1 = ttk.Label(Frame, text = "Physics:", font = ("Arial", 10))
```

```
Label1.grid(row = 1, column = 0, sticky = "w", padx = 10, pady = 10)
```

```
Entry1 = ttk.Entry(Frame)
```

```
Entry1.grid(row = 1, column = 1, sticky = "w", padx = 10, pady = 10)
```

```
Label2 = ttk.Label(Frame, text = "Hist.Geo:", font = ("Arial", 10))
```

```
Label2.grid(row = 2, column = 0, sticky = "w", padx = 10, pady = 10)
```

```
Entry2 = ttk.Entry(Frame)
```

```
Entry2.grid(row = 2, column = 1, sticky = "w", padx = 10, pady = 10)
```

- ▶ `Label3 = ttk.Label(Frame, text = "ICT:", font = ("Arial", 10))`
- ▶ `Label3.grid(row = 3, column = 0, sticky = "w", padx = 10, pady = 10)`

- ▶ `Entry3 = ttk.Entry(Frame)`
- ▶ `Entry3.grid(row = 3, column = 1, sticky = "w", padx = 10, pady = 10)`

- ▶ `Label4 = ttk.Label(Frame, text = "Edu.Islamique", font = ("Arial", 10))`
- ▶ `Label4.grid(row = 4, column = 0, sticky = "w", padx = 10, pady = 10)`

- ▶ `Entry4 = ttk.Entry(Frame)`
- ▶ `Entry4.grid(row = 4, column = 1, sticky = "w", padx = 10, pady = 10)`

- ▶ `Label5 = ttk.Label(Frame, text = "English", font = ("Arial", 10))`
- ▶ `Label5.grid(row = 5, column = 0, sticky = "w", padx = 10, pady = 10)`

- ▶ `Entry5 = ttk.Entry(Frame)`
- ▶ `Entry5.grid(row = 5, column = 1, sticky = "w", padx = 10, pady = 10)`

- ▶ `Label6 = ttk.Label(Frame, text = "Arabic", font = ("Arial", 10))`
- ▶ `Label6.grid(row = 6, column = 0, sticky = "w", padx = 10, pady = 10)`

- ▶ `Entry6 = ttk.Entry(Frame)`
- ▶ `Entry6.grid(row = 6, column = 1, sticky = "w", padx = 10, pady = 10)`

- ▶ `Label7 = ttk.Label(Frame, text = "French", font = ("Arial", 10))`
- ▶ `Label7.grid(row = 7, column = 0, sticky = "w", padx = 10, pady = 10)`
- ▶ `Entry7 = ttk.Entry(Frame)`
- ▶ `Entry7.grid(row = 7, column = 1, sticky = "w", padx = 10, pady = 10)`
- ▶ `Label8 = ttk.Label(Frame, text = "Maths", font = ("Arial", 10))`
- ▶ `Label8.grid(row = 8, column = 0, sticky = "w", padx = 10, pady = 10)`
- ▶ `Entry8 = ttk.Entry(Frame)`
- ▶ `Entry8.grid(row = 8, column = 1, sticky = "w", padx = 10, pady = 10)`
- ▶ `Label9 = ttk.Label(Frame, text = "SVT", font = ("Arial", 10))`
- ▶ `Label9.grid(row = 9, column = 0, sticky = "w", padx = 10, pady = 10)`
- ▶ `Entry9 = ttk.Entry(Frame)`
- ▶ `Entry9.grid(row = 9, column = 1, sticky = "w", padx = 10, pady = 10)`

THE CORE OF THE PROGRAM

Several thin, white, parallel diagonal lines are positioned in the bottom right corner of the image, extending from the right edge towards the center.

- ▶ Saving mechanism; grabs grades and the best orientation and put'em in a file called: Orientation_Result.txt
- ▶ `def save_to_file(result, marks):`
- ▶ `import os`
- ▶ `file_path = os.path.join(`
- ▶ `os.path.dirname(os.path.abspath(__file__)),`
- ▶ `"Orientation_Result.txt"`
- ▶ `)`
- ▶ `with open(file_path, "w", encoding="utf-8") as file:`
- ▶ `file.write("=== Here Are Your Marks And Your Best Orientation! ===\n")`
- ▶ `for subject, value in marks.items():`
- ▶ `file.write(f'{subject}: {value}\n')`
- ▶ `file.write(f'Best Orientation: {result}\n\n')`

- ▶ Initializing variables and checking that all inputs contain numbers after clicking the button
- ▶ If there is a problem an error will be thrown to the user
- ▶ `def Submit():`
- ▶ `global Physics, HistGeo, ICT, Edulslamique, English, Arabic, French, Maths, SVT`
- ▶ `try:`
- ▶ `Physics = float (Entry1.get())`
- ▶ `HistGeo = float (Entry2.get())`
- ▶ `ICT = float (Entry3.get())`
- ▶ `Edulslamique = float (Entry4.get())`
- ▶ `English = float (Entry5.get())`
- ▶ `Arabic = float (Entry6.get())`
- ▶ `French = float (Entry7.get())`
- ▶ `Maths = float (Entry8.get())`
- ▶ `SVT = float (Entry9.get())`
- ▶ `except ValueError:`
- ▶ `messagebox.showerror("Input Error", "Please fill all fields with numbers only.")`
- ▶ `return`

- ▶ Initializing variables containing every orientation's marks, calculating the one with most marks, putting in a variable called "Best" and calculating total orientations scores "For Percentage"
- ▶ $\text{AuthenticEducation} = (\text{Physics} * 0) + (\text{HistGeo} * 3) + (\text{ICT} * 2) + (\text{Edulslamique} * 4) + (\text{English} * 2) + (\text{Arabic} * 4) + (\text{French} * 3) + (\text{Maths} * 2) + (\text{SVT} * 2)$
- ▶ $\text{ArtsAndHumanities} = (\text{Physics} * 0) + (\text{HistGeo} * 4) + (\text{ICT} * 2) + (\text{Edulslamique} * 0) + (\text{English} * 3) + (\text{Arabic} * 4) + (\text{French} * 4) + (\text{Maths} * 2) + (\text{SVT} * 2)$
- ▶ $\text{ScientificTrunk} = (\text{Physics} * 4) + (\text{HistGeo} * 2) + (\text{ICT} * 2) + (\text{Edulslamique} * 0) + (\text{English} * 3) + (\text{Arabic} * 2) + (\text{French} * 3) + (\text{Maths} * 4) + (\text{SVT} * 4)$
- ▶ $\text{TechnologicalStump} = (\text{Physics} * 4) + (\text{HistGeo} * 2) + (\text{ICT} * 3) + (\text{Edulslamique} * 0) + (\text{English} * 3) + (\text{Arabic} * 2) + (\text{French} * 3) + (\text{Maths} * 4) + (\text{SVT} * 0)$
- ▶ $\text{Best} = \max(\text{AuthenticEducation}, \text{ArtsAndHumanities}, \text{ScientificTrunk}, \text{TechnologicalStump})$
- ▶ $\text{TotalScore} = \text{AuthenticEducation} + \text{ArtsAndHumanities} + \text{ScientificTrunk} + \text{TechnologicalStump}$

- ▶ Outputting to the user based on the best Orientation
- ▶ if (Best == AuthenticEducation):
 - ▶ best_orientation = "Authentic Education"
- ▶ elif (Best == ArtsAndHumanities):
 - ▶ best_orientation = "Arts And Humanities"
- ▶ elif (Best == ScientificTrunk):
 - ▶ best_orientation = "Scientific Trunk"
- ▶ elif (Best == TechnologicalStump):
 - ▶ best_orientation = "Technological Stump"
- ▶ messagebox.showinfo(
 - ▶ "Analysis Results",
 - ▶ f"The Best Orientation For You is: {best_orientation}\n\n"
 - ▶ f"Authentic Education: {AuthenticEducationPercent:.0f}%\n"
 - ▶ f"Arts And Humanities: {ArtsAndHumanitiesPercent:.0f}%\n"
 - ▶ f"Scientific Trunk: {ScientificTrunkPercent:.0f}%\n"
 - ▶ f"Technological Stump: {TechnologicalStumpPercent:.0f}%\n"
 - ▶)

- ▶ Creating a variable of type "dictionary" to store the name of subject plus its value "the mark you typed"
- ▶ marks = {
 - ▶ "Physics": Physics,
 - ▶ "Hist.Geo": HistGeo,
 - ▶ "ICT": ICT,
 - ▶ "Edu.Islamique": Edulslamique,
 - ▶ "English": English,
 - ▶ "Arabic": Arabic,
 - ▶ "French": French,
 - ▶ "Maths": Maths,
 - ▶ "SVT": SVT
 - ▶ }
- ▶ Calling the function we set in [Slide 8](#)
- ▶ save_to_file(best_orientation, marks)

- ▶ Creating a "Submit" button
- ▶ `SubmitButton = tk.Button(Frame, text = "Submit", bg = "gray", command = Submit)`
- ▶ `SubmitButton.grid(row = 10, column = 0, colspan = 2, pady = 10)`
- ▶ Keeping the app running over and over until the user exits
- ▶ `root.mainloop()`
